To Whom It May Concern,

I am writing to express my interest in an entry-level Cybersecurity / SOC Analyst position at your organization. As a BCA Cybersecurity student at Amity University with a focus on Blue Team operations and security monitoring, I am eager to bring my hands-on skills and steadily growing expertise to a team that values practical, defense-oriented security work.

Through TryHackMe, where I currently rank in the top 15% globally, I have built practical experience in log management, network security, and threat detection. I further developed my SOC-relevant skills by completing Deloitte's Cyber Job Simulation on Forage, applying log analysis and web security concepts to simulated real-world incidents. Alongside guided learning, I have completed Cisco's Introduction to Cybersecurity training to strengthen my networking and security fundamentals.

Beyond structured coursework, I build practical security projects to reinforce what I learn. I developed SafeURL, a phishing URL detector using the Google Safe Browsing API, presented at the Technovate 2026 hackathon. I have also built a Shodan-powered security monitoring dashboard, an AES-256 image encryption tool, a password strength analyzer based on Shannon entropy, and an OSINT/SOC situational-awareness dashboard combining live threat and geospatial data feeds. These projects reflect both my curiosity about how systems break and my drive to build tools that help detect and prevent that from happening.

I am also developing a specific interest in AI security -- understanding how AI systems can be attacked, misused, or defended -- which I believe will be an increasingly important area within cybersecurity in the years ahead. I am currently working toward further certifications (eJPT, BSCP, OSCP) to deepen my technical foundation.

I would welcome the opportunity to discuss how my skills and enthusiasm for Blue Team and SOC work could contribute to your team. Thank you for considering my application; I look forward to the possibility of speaking further.

Sincerely,

Rajat Kumar
