

RAJAT KUMAR

Cybersecurity Student | SOC & Blue Team Enthusiast | AI Security

Email: rajatkumargdsss@gmail.com | GitHub: github.com/rajat-kumar-sec | LinkedIn: linkedin.com/in/rajatkumar-3649a0372 | Phone: 9650736528 | Location: India

PROFESSIONAL SUMMARY

BCA Cybersecurity student at Amity University with a practical focus on Blue Team operations, SOC log analysis, and threat detection. Hands-on experience through TryHackMe (Top 15% globally), Deloitte's Cyber Job Simulation, and a self-built portfolio of security tools. Actively developing skills in AI security, exploring how AI systems can be attacked, misused, and defended. Seeking an entry-level Cybersecurity / SOC Analyst role to apply and grow these skills.

TECHNICAL SKILLS

- Security Operations: Log analysis, threat detection, incident triage fundamentals, network security monitoring
- Offensive/Defensive Practice: TryHackMe rooms across network security, log management, and AI/LLM security (ContAIgment, AI Threat Modelling, LLM Security, AI System Reconnaissance)
- Tools & Platforms: Shodan API, Google Safe Browsing API, NVD CVE feed, Wireshark basics, Docker (basic), WSL/Linux
- Programming: Python (security tooling and automation), JavaScript
- Cryptography & Data Security: AES-256 encryption implementation, Shannon entropy-based password strength analysis
- OSINT & Reconnaissance: Open-source intelligence gathering, vulnerability disclosure program (VDP) recon
- Networking: Cisco Networking Academy training (Introduction to Cybersecurity)

PROJECTS

SafeURL - Phishing URL Detector

Technovate 2026 Hackathon

- Built a phishing URL detection tool integrating the Google Safe Browsing API to flag malicious links in real time
- Presented at Technovate 2026; judges identified a browser-extension version as a strong next step

Sentinel Dashboard - OSINT/SOC Monitoring Tool

- Developed a security monitoring dashboard using the Shodan API for exposed-asset and threat visibility

OSINT/SOC Hacker Dashboard

- Built a real-time situational awareness dashboard combining Leaflet.js, satellite.js, the OpenSky Network, the NVD CVE feed, and Open-Meteo for live threat and situational data

PHANTOM//ORBIT - Real-Time Satellite Tracker

- Created a real-time satellite tracking application with automatic country-of-origin detection

AES-256 Image Encryption Tool

- Implemented AES-256 encryption/decryption for image files to demonstrate applied cryptography concepts

Shannon Entropy Password Analyzer

- Built a tool to score password strength using Shannon entropy calculations

CyberGPT - AI Security Chatbot

- Developed a chatbot using the Claude API to answer cybersecurity questions, combining interest in AI with security education

CERTIFICATIONS & TRAINING

- Cisco Introduction to Cybersecurity - Certificate of Completion (with 7 module badges)
- Deloitte Cyber Job Simulation - Forage (log analysis and web security tasks in a simulated SOC environment)
- TryHackMe - Ranked in Top 15% globally

EDUCATION

- Amity University, Greater Noida Campus, India

ADDITIONAL INFORMATION

- Hackathon Participant: Technovate 2026
- Actively pursuing bug bounty research, focusing on vulnerability disclosure programs (VDPs) and deep reconnaissance techniques
- Certification roadmap in progress: eJPT, BSCP, OSCP
